MEMORANDUM FOR THE RECORD

SUBJECT: Trip Report -- [REDACTED]  
3 - 7 August 1964.

1. The primary purpose of this trip was to participate in the four-day Microdensitometer Training Program, PAR-225, Contract [REDACTED] Enclosure 1 is a copy of the comments on this training program.

2. [REDACTED] and the undersigned discussed a number of minor items under Contract [REDACTED] on 7 August 1964. The items discussed and the conclusion or action taken were as follows:

a. At my request [REDACTED] gave me some descriptive literature on the [REDACTED] "Kind 1705" photorecording paper. While originally designed to provide two-color recordings of multiple cathode ray tube traces, the red and green dyes used in the Kind 1705 lend themselves for use in the production of anaglyphs. The literature was given to [REDACTED] who has expressed an interest in anaglyphs.

b. [REDACTED] also provided me with a list of ASA (American Standards Association) and [REDACTED] dimensions and tolerances for cut film. [REDACTED] had requested this data for use in the chip standardization program. The original copies of the data are filed in the Development Branch "Company" files under [REDACTED]

c. [REDACTED] was given a supply of our "Installation Engineering" forms. He was instructed to complete and submit the forms to us for each item of deliverable hardware. [REDACTED] was also requested to provide tentative data as early in the design phase as practicable and to up-date this tentative data as it becomes more exact.

d. Few of the PAR's under Contract [REDACTED] have even an estimated date of completion. [REDACTED] was requested to provide the estimated date of completion on all active PAR's.
